**Notes for starters**

On choosing a course consider the wind direction and strength AND the tide for the evening. The RED wind directions at the top of each racecourse are intended as guidelines, to ensure there is a beat on each course. The length of the course is a guideline for the strength. Pick a course that best matches the wind direction and strength and the tide on the day. For example, do not send boats up the river on a falling tide and dying breeze.

The aim is to run a race for 75mins for the LEAD boat. A good guideline on length is course 6 in 10-15kts, 2hours either side of the tide.
